

Compare FusionAuth to Firebase

While they are both called identity management solutions, FusionAuth and Firebase are very different products designed with a substantially different set of features. As true CIAM solutions, they really don't compare. The most distinct difference is FusionAuth is a single-tenant solution, not a SaaS platform. You control your data instead of being a feeder into the Google data engine. Read more about why this is so important in this [whitepaper on single- and multi-tenant platforms](#).

FusionAuth also installs on any server, anywhere in the world, for complete user data control. Use the chart below to compare our features and read more in our [API documentation](#).

		
Free for unlimited users		✓
Authentication for web & mobile applications	✓	✓
OAuth token & API key management	✓	✓
Reporting & analytics	✓	✓
Unrestricted users & groups	✓	✓
Authorization & permissions	✓	✓
Skinnable login & registration	✓	✓
Multiple applications & single sign-on	✓	✓
Multi-factor authentication	✓	✓
Advanced user search & segmentation		✓
User management interface		✓
Self-hosted & private-cloud options		✓
Audit logs		✓
Log retention		✓
